Florin BALAȘIU

Florin Balasiu received his diploma in electrical engineering from Technical University of Bucharest, Romania, and his PhD from Technical University of Timisoara. He began working as a protection engineer for the Romania TSO, Transelectrica, dealing with protection and control equipment. In 2008, he joined the Romanian National Dispatching Centre team, involved in protection, control and automation parameters calculation, and establishing the protection philosophies for high-voltage power plants and substations. He was in charge assisting the commissioning of the first synchrophasors system installed by Transelectrica. He retired in 2025 and continued to support the commissioning of STATCOM equipment in both 400 kV Sibiu South and Bradu Substations, Romania. He is an active fellow of the Romanian National Committee CIGRE continuing to contribute to publishing technical papers on protection and control for high-voltage substations.
